## Outline

(1) State of the art
(2) Overview of the method
(3) Harvesting
(4) Crawling
(5) Patching
(6) Evaluation
(7) Conclusion and future work
(8) References

## State of the art

## Web-based corpora

- large web-based corpora for national varieties of several languages available (cp. eg. Roth (2012), Baroni et al. (2009), Cook and Hirst (2012))
- BooTCaT by Baroni and Bernardini (2004) tool which facilitates the compilation of web-based corpora
- corpus building for minority languages - web crawling software by Scannell (2007)

## Problems of state-of-the art approaches

## Quantity, quality and restriction

State-of-the-art approaches assume 2 main criteria...

- ... a certain variety has its own top-level domain
- ... a domain contains enough content to build a large corpus
But a lot of small varieties do not meet these criteria.

## Our main contributions

## Compiling web-based corpora for smaller varieties

In the following we ...

- ... explain a procedure for web-based corpora of language varieties that are not restricted to one single-top level domain and face data sparsity (example: STirWaC: corpus of South Tyrolean German).
- .... introduce a procedure for improving the balance of the corpus in terms of the diversity of texts
- ... describe and evaluate the resulting STirWaC, the largest ever-built web-corpus for South
Tyrolean German

## Overview of the method

## restriction

harvest a base corpus

## quantity

crawling a larger corpus
quality
expanding the coverage over less represented text types

## Overview of the method

Figure: Work flow

## Overview of the method

Figure: Work flow: Harvesting

|  | Corpus | 1.1a | I.1b | 1.1 | 1.2 | I |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Method | Harvesting | Harvesting | $1.1 \mathrm{a} \cap \mathrm{l} .1 \mathrm{~b}$ | Harvesting | $1.1 \cap 1.2$ |
|  | Domains | .it | $\neg\{. \mathrm{de}$ \} | - | all | - |
|  | Seeds | 100 terms | 42 terms | - | 1,000 terms | - |
|  | Search Tuples | 500 of length 3 | 500 of length 2 | - | 5,000 of length 2 | - |
|  | Max Results/Query | 50 | 50 | - | 30 | - |
|  | Upper Limit | 25,000 | 25,000 | 15,060 | 150,000 | 40,588 |

Table: Summary of corpus I.

## Distribution of top-level domains

| Domain Corpus | $I .1 a$ | $I .1 b$ | $I .1$ | $I .2$ | $I$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| .it | $11,070(100.0 \%)$ | $1,256(31.48 \%)$ | $12,149(81.71 \%)$ | $3,551(13.81 \%)$ | $15,099(38.22 \%)$ |
| . de | - | - | - | $10,544(41.00 \%)$ | $10,544(26.70 \%)$ |
| .at | - | $373(9.35 \%)$ | $373 \quad(2.51 \%)$ | $2,779(10.81 \%)$ | $3,090(7.82 \%)$ |
| .ch | - | $126 \quad(3.16 \%)$ | $125(0.84 \%)$ | $989 \quad(3.85 \%)$ | $1,102(2.79 \%)$ |
| other | - | $2,235(56.02 \%)$ | $2,222(14.94 \%)$ | $7,856(30.55 \%)$ | $9,667(24.47 \%)$ |
| total | 11,070 | 3,990 | 14,869 | 25,719 | 39,502 |

Table: Distribution of top-level domains of harvested corpora

## Overview of the method

Figure: Work flow: Crawling

## Distribution of top-level domains

| Corpus <br> Domain | 1 | II. 1 | 11.2 | I/ | STirWaC |
| :---: | :---: | :---: | :---: | :---: | :---: |
| .it | 15,099 (38.22\%) | 30,573 (66.63\%) | 4,027 (17.26\%) | 32,759 (51.25\%) | 36,561 (42.15\%) |
| .de | 10,544 (26.70\%) | 723 (1.58\%) | 537 (2.30\%) | 1,171 (1.83\%) | 11,668 (13.45\%) |
| .at | 3,090 (7.82\%) | 116 (0.25\%) | 145 (0.62\%) | 215 (0.34\%) | 3,283 (3.78\%) |
| .ch | 1,102 (2.79\%) | 75 (0.16\%) | 30 (0.13\%) | 104 (0.16\%) | 1,204 (1.39\%) |
| other | 9,667 (24.47\%) | 14,401 (31.38\%) | 18,597 (79.69\%) | 29,674 (46.42\%) | 34,033 (39.23\%) |
| total | 39,502 | 45,888 | 23,336 | 63,923 | 86,749 |

Table: Distribution of top-level domains.

## Summery of all corpora

|  | Corpus | I | II. 1 | II. 2 | II | STirWaC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Method | Harvesting | Crawling | Crawling | II. $1 \cap \mathrm{II} .2$ | $1 \cap \mathrm{II}$ |
| Setup | Domains | - | I.1 |  |  |  |
|  | $1.2^{1} \backslash\{. \mathrm{de}, . \mathrm{at}, . \mathrm{ch}\}$ | - | - |  |  |  |
|  | Seeds | - | 14,245 ${ }^{2}$ URLs | 4,625 URLs | - | - |
|  | Search Tuples | - | - | - | - | - |
|  | Max Results/Query | - | - | - | - | - |
|  | Upper Limit | 40,588 | - | - | 69,224 | 103,425 |
| Results | Unique URLs | 39,813 | 135,285 | 65,554 | 64,892 | 88,651 |
|  | DeDuper-ed Docs | 39,502 | 45,888 | 23,336 | 63,923 | 86,749 |
|  | Tokens | 50,734,333 | 29,777,384 | 22,170,902 | 47,869,771 | 82,262,840 |
|  | Lemmas | 210,657 | 160,035 | 157,264 | 195,981 | 237,623 |

Table: Summary of the corpus.
${ }^{1}$ From these URLs only the single shortest URL per site was kept.
${ }^{2}$ This should be 14,371 but our exclusion pattern was a tad too generous.

## Overview of the method

Figure: Work flow: Patching

## Patching to increase diversity

## Assessing corpus diversity and text types

- patching the STirWaC corpus with documents not reached by standard BootCaT harvest and crawling.
- reach a better balancedness in terms of text type
- text type: texts that have a high similarity to each other with respect to a bunch of features

## Patching to increase diversity

## Basic idea

a specialized seed term list, specific to subcorpora of certain text types, can be used to detect and exploit previously missed parts of the Internet.

## Tasks to tackle

- group the text into subcorpora as basis for seed term extraction $\rightarrow$ left to future work
- classify our documents according to text features
- verify that seed term list compiled from grouped subcorpora enables us to retrieve documents from the same text type

## Patching to increase diversity

## Underlying approach

- method developed by Forsyth and Sharoff (2013)
- manually evaluated text set on several linguistic aspects
- attributes of texts used as coordinates of a vector
- attribute vectors are reduced to two and mapped on a 2D map
- plot STirWaC with the help of trained tool for standard German

## Plotting texts on a 2D space with regard to their text features

Pentaglossal Corpus texts in 2D coordinate space.

Figure: The pentaglossal corpus collected by Forsyth and Sharoff (2013) plotted on a 2D similarity space.

## Evaluation

| collocation/term | Typical of | $\mathbf{r f}_{a t}$ | $\mathbf{r f}_{c h}$ | $\mathbf{r f}_{d e}$ | $\mathbf{r f}_{s t}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| wilder Knoblauch | $A T D E$ | 1.8 | 1.0 | 1.3 | $\mathbf{4 . 9}$ |
| Blaulicht und Sirene | $C H D E$ | 2.2 | $\mathbf{5 . 9}$ | 3.7 | 2.4 |
| Blaulicht und Folgetonhorn | $A T$ | $\mathbf{4 . 0}$ | 0 | 0 | 0 |
| Blaulicht und Martinshorn | $D E$ | 1.8 | 1.5 | $\mathbf{8 . 7}$ | 0 |
| in angetrunkenem Zustand | $C H D E$ | 0.7 | $\mathbf{5 5 . 4}$ | 2.0 | 37.7 |
| Einspruch einlegen | $D E$ | 23.0 | 34.8 | $\mathbf{9 0 . 8}$ | 35.3 |
| große Töne spucken | $D E$ | $\mathbf{1 2 . 1}$ | 9.8 | 11.8 | 0 |
| Baukonzession | STIR | 1.5 | 1.5 | 4.0 | $\mathbf{3 0 5 . 1}$ |
| Handelsoberschule | STIR | 0.4 | 0 | 0 | $\mathbf{1 8 1 . 1}$ |
| Regionalrat | STIR | 7.3 | 11.8 | 8.7 | $\mathbf{4 9 4 . 8}$ |
| innerhalb <date> | STIR | 0 | 0 | 0.3 | $\mathbf{1 7 5 . 0}$ |
| halbmittag | STIR | 0.4 | 0 | 0 | $\mathbf{2 5 . 5}$ |
| weißer Stimmzettel | STIR | 0 | 0 | 0 | $\mathbf{6 . 1}$ |

Table: Relative frequencies of characteristic $n$-grams over $S T i r W a C\left(r_{s t}\right)$ and three other corpora covering documents in Austrian German ( $\mathbf{r f}_{a t}$ ), Swiss German ( $\left(\mathbf{f}_{c h}\right)$ and the standard German ( $\mathbf{r f}_{d e}$ ) Roth (2012)

## Conclusion

## Conclusion

- we have built the largest South Tyrolean web corpus currently available
- corpus highly relevant for South Tyrolean German
- presented a blueprint approach for the compilation of specialized corpora of other language varieties
- introduced a new approach towards the extension of web corpora considering text type

## Future work

- improve size and representativeness of STirWaC
- fully implement the grouping approach of subcorpora with respect to text type
